

Client Data Set
Submission Guide
for Fiscal Year 2025

Updates to Client File

No updates for SFY25.

Client File Data Conventions

Field Types

1. Numeric (#) Must contain only numeric characters 0-9
2. Alpha/Numeric (X) Can contain both letters and numbers (letters should always be in upper case)
No special characters like dash, slash, or commas unless specifically authorized.

Field Formats

1. # - numeric digit
2. X - any character (letters and numbers allowed, letters in upper case only)
3. YYYYMMDD - numeric date field in the form:
YYYY – four-digit year
MM – two-digit month
DD – two-digit day

Note: Dates should contain only numeric characters. Do not enter date separators, such as “/” or “-” in these fields.

Standard Codes

Standard coding methodology is used throughout the data set whenever possible. Some examples are:

1. For fields requiring a “Yes” or “No”, the codes are:
0 No
1 Yes
2. Codes for “Not Applicable” are dependent on field length, and always end in “6”. This code is used to indicate that the field does not apply to the client. An example would be the Pregnant Women field for male clients. Those fields that have Not Applicable as valid codes use the coding convention below:

<u>Code</u>	<u>Field Length</u>
6	1
96	2
etc.	

3. Codes for “Unknown” are dependent on field length, and always end in “7”. IPOP would prefer that this code NOT be used unless the Center wants to capture the difference between Unknown and Not Collected. The Not Collected code is the recommended code for this information. Both codes will be treated in the same manner. Both could count against the General Error Standard. Those fields that have Unknown as valid codes use the coding convention below:

<u>Code</u>	<u>Field Length</u>
7	1
97	2
etc.	

4. Codes for “Not Collected” are dependent on field length, and always end in “8”. This code is used by TEDS to indicate a field that is not collected. Kentucky uses it to indicate that the data was not collected from the client, but that the field is one that Kentucky collects. Both this code and the previous code are treated in the same manner. Both could count against the General Error Standard. Those fields that have Not Collected as valid codes use the coding convention below:

<u>Code</u>	<u>Field Length</u>
8	1
98	2
etc.	

3. Codes for “Other” are also field length specific, but always end in “9”.

<u>Code</u>	<u>Field Length</u>
9	1
99	2
etc.	

Historical Client Guidelines & Data Submission Procedure

The client dataset information is captured on a monthly basis (i.e., the dataset will capture up to 12 months worth of data per client per fiscal year).

This will allow IPOP to effectively track changes in client dataset information. Also, events and client service information will be tied more closely to accurate and timely information that will represent a “true” picture of the information submitted.

Each monthly Client file should include a record for each client for whom services were provided during that month. Only those clients with one or more services during that month should be reported.

A ~~strike through~~ indicate fields no longer required, edited or considered. Fields after 88 are for internal use only.

Note: Input records completely replace existing records for matching Year and Month.

Under the Errors column;

F = Fatal error - field vital to record, entire record rejected.

G = General error - invalid value, data recorded for reporting purposes, value changed to Unknown / Not Collected code.

P = Possible error - value in this field should be reviewed if it is outside normal bounds or is in conflict with another field.

C = Completeness - this field checked against Not Collected codes **for Status 1 clients ONLY**

NOTE: Some fields are considered for Completeness ONLY if the client's diagnosis puts them in the appropriate program. See the Incomplete Criteria column.

NOTE: Only the following fields are required for Client Status 2 clients, however all fields containing data will be edited.

Region Number, Client ID, System Reporting Date, Date of Birth, Client Status Code, and Client 2 Description

For Client Status 3 clients, the following fields are required. No other fields will be edited.
Region Number, Client ID, System Reporting Date, and Client Status Code

All other fields will be accepted ONLY if valid data is present. The only errors that may occur related to the other fields are when two fields containing valid data are in conflict, such as Pregnant Male clients and duplicate diagnostic codes.

NOTE: For the purpose of cross-checking fields,

- if the client has any Diagnosis that is a Mental Health diagnosis, then the client is a "MH" client;
- if the client has any Diagnosis that is an Intellectual Disabilities diagnosis, then the client is an "ID" client";
- if the client has any Diagnosis that is an Alcohol or Drug diagnosis, then the client is a "SA" client;

Timeliness Standard FAILS if final submission not completed by the last day of the month following the Reporting Period.

Fatal Error Standard FAILS if any fatal field has more than 1.0% invalid values. See "Standards for Information Quality" for list of fatal fields.

General Error Standard FAILS if any non-fatal field has more than the maximum error rate of invalid values allowable for the field. See "Standards for Information Quality" for list of non-fatal fields and maximum error rate.
