INCREASING CULTURAL COMPETENCY IN WORKING WITH SEXUAL AND GENDER MINORITY PATIENTS: INCLUSIVITY AND AWARENESS IMPROVES TREATMENT OUTCOMES

Ed Johnson, M.Ed, MAC, LPC
The Carolinas & Kentucky Program Manager, Southeast ATTC
edjohnson@msm.edu
Learning Objectives

Participants will gain understanding of:

- Why a “safe space” is important for LGBT Individuals on Campus.
- The characteristics of an LGBTQ Ally
- The concept of LGBT (Minority) Stress
- The Coming Out process and foreclosure
- The difference between Gender Identity and Sexual Orientation.
- The Transitioning process for Transgender Individuals
Lesbians and Substance Abuse

- Studies have found that lesbians are between 1.5 and 2 times more likely to smoke than heterosexual women.
- A number of studies have also suggested that lesbians are significantly more likely to drink heavily than heterosexual women.
- Bisexual women report more hazardous drinking than heterosexual or lesbian women.
Lesbians and Suicide

Results from an anonymous survey administered in 33 healthcare sites across the United States found that:

- Lesbian and bisexual women who were “out” experienced more emotional stress as teenagers and were 2 to 2.5 times more likely to experience suicidal ideation in the past 12 months than heterosexual women; and
- Lesbian and bisexual women who were not “out” were more likely to have attempted suicide than heterosexual women.
Gay Men and Substance Misuse

- Some studies show that gay men use substances, including alcohol and illicit drugs, at a higher rate than the general population.
- Many studies also indicate that gay men use tobacco at much higher rates than straight men—reaching nearly a 50 percent difference in some cases.
Gay Men and Suicide

Factors such as verbal and physical harassment, negative experiences related to “coming out” (including level of family acceptance), substance use, and isolation all contribute to higher rates of suicidal attempts and completions among gay men and youth than among other populations.
Data have shown that bisexual adults exhibit significantly higher rates of binge drinking (22.6 percent) than their heterosexual counterparts (14.3 percent).

- This significant difference in rates was evident only among bisexual women (23.7 percent).

- When compared by gender, bisexual women were significantly more likely to binge drink than straight women (8.3 percent).
Bisexuals and Suicide

- Studies have suggested that bisexuals are much more likely to report higher levels of self-harm, thoughts of suicide, and suicidal attempts than heterosexuals, gay men, and lesbians.

- One study also found that a significantly higher percentage of bisexual adults (13.3 percent) reported being dissatisfied or very dissatisfied with their lives as compared to straight adults (5.2 percent).
Numerous studies have suggested that:

- Between 16 to 60 percent of transgender people are victims of physical assault or abuse.
- Between 13 to 66 percent are victims of sexual assault.
Some studies have shown that marijuana, crack cocaine, and alcohol are the most commonly used drugs by transgender people. Other studies have also found alarming rates of methamphetamine use (4 to 46 percent) and injection drug use (2 to 40 percent).

Some studies suggest that tobacco use rates among transgender people can range from 45 to 74 percent.

Studies have also suggested that barriers to substance abuse treatment services for this population often include discrimination, provider hostility and insensitivity, strict binary gender (male/female) segregation within programs, and lack of acceptance in gender-appropriate recovery groups.
Studies have shown that suicidal ideation is widely reported among transgender people and can range from 38 to 65 percent. Studies have also found that suicide attempts among this population can range from 16 to 32 percent.
Recovery is a process of change through which individuals improve their health and wellness, live a self-directed life and strive to reach their full potential.

SAMHSA 2011
RECOVERY PRINCIPLES

Emerges from hope
Person-centered
Occurs via many pathways
Is Holistic

Culturally-based and influenced
Supported through relationships
Supported by peers and allies

Supported by addressing trauma
Involves individual, family, and community strengths and responsibility

Based on respect

SAMHSA/Hyde, P. 2011

How many LGBTQ clients are in your treatment facility?

- How many total clients does your facility/agency/organization see/treat on a monthly or annual basis?

- Of those, how many are "out" to you as lesbian, gay, bisexual, or transgender?

- How many are out as LGBTQ to everyone in the treatment setting?
It depends on how you ask the question

- **Sexual / Romantic Attraction** - Attraction or desire to be in a primary sexual or loving relationship

- **Sexual Behavior** - Voluntary activity that involves genital contact and sexual excitement or arousal.

- **Sexual Identity** - Personally selected label attached to perception about their sexuality

Homophobia is an irrational fear of gay and lesbian people or fear of same-sex relationships. In its most extreme form, homophobia is a hatred for or violence against LGBT persons.

Internalized Homophobia (shame based reaction to Heterosexism)
Heterosexism

A system of attitudes, bias and discrimination in favor of opposite sex sexuality and relationships. It can include the presumption that other people are heterosexual or that opposite sex attractions and relationships are the only norm and therefore superior.
Ilan Meyers (2003) proposed that the higher incidence of mental and substance use disorders in LGB Individuals was essentially the result of a “Hostile and stressful social environment” (p. 674) to which LGB people are subjected as a result of their sexual minority status.
Also referred to as “Minority Stress”, refers to the chronic stress experienced by LGBT individuals related to stigmatization, marginalization and lack of institutional and social supports within a predominantly heterosexual society (Warren & Barber 2009)
“Sexual abuse occurs whenever one person dominates and exploits another using sexual feelings and behavior to hurt, misuse, degrade, humiliate and control another. The abuse comes from a person who violates a position of trust, power and protection of a child”

The Relationship Between Stress and Substance Use Disorders

Long-term exposure to stress related hormones alters the brain chemistry, resulting in a disregulation of the Limbic System in the Brain. This disregulation adversely impacts the “Salience - Reward” pathway in the Brain.

Processes of Minority Stress

- Environmental and other external events that occur in an individual’s life as a result of sexual minority status. They create overt stress (chronic or acute). Examples would be discrimination or threats to safety and security.

- Anticipation and expectation that external stressful events will occur and the vigilance that the person must maintain because of the expectation.

- The internalization of the negative attitudes and prejudices from society.
Covert Cultural Sexual Abuse

Chronic verbal, emotional, psychological and sometimes sexual assaults against an individual’s gender expression, sexual feelings and behaviors

(Kort 2008)
Processes of Minority Stress - Resilience

- Group solidarity
- Internal group comparison vs. external
- Can access when they are clearly identified as a group member
Coming out is the term used to describe the process of and the extent to which one identifies as lesbian, gay or bisexual.

There are two parts to this process: coming out to oneself and coming out to others.

It includes the realization that one is gay, lesbian and bisexual and accepting that fact and deciding what to do about it.
Coming Out (continued)

- It is very personal. It happens different ways and occurs at different ages.
- Coming Out is a continuing, sometimes lifelong process.
- Some people are afraid of being rejected but others worry that their sexual identity will be the overriding focus in future interactions with the other person.
- Other issues are the extent of the revelation, timing and anticipated consequences.
Passing

Is a person’s being regarded as a member of a social group other than his or her own, such as a different gender, race, sexuality or disability status; generally with the aim of gaining social acceptance or gaining access to privilege of the power group.
Our culture tends to assume heterosexuality and persons who do not correct the heterosexual assumption are sometimes said to be “passing” as heterosexual.

They usually experience internal conflict and experience hostility from those who are being honest and open,
Stage I: Identity Confusion
Occurs when a person begins to realize that he/she may relate to or identify as being gay or lesbian, a process of personalizing the identity.

- **Tasks:** Exploration and increasing awareness
- **Feelings:** Anxiety, confusion
- **Defenses:** Denial
- **Recovery:** Having a confidential support person
Stage II: Identity Comparison
(CASS Model continued)

Occurs when a person accepts the possibility the he/she might be gay or lesbian.

- **Tasks:** Exploration of implications, encountering others like oneself
- **Feelings:** Anxiety, excitement
- **Defenses:** Bargaining and rationalizing
- **Recovery:** Meeting gays/lesbians/bisexuals/transgender persons in recovery
Stage III: Identity Tolerance

Occurs when a person comes to accept the probability that he/she is an LGBT person.

- **Tasks:** Recognizing social and emotional needs as a gay man or lesbian
- **Feelings:** Anger, excitement
- **Defenses:** Reactivity
- **Recovery:** How to be gay, lesbian, bisexual, or transgender and stay sober
Stage IV: Identity Acceptance

Occurs when a person fully accepts rather than tolerates himself or herself as an LGBT person.

- **Tasks:** Development of community and acculturation
- **Feelings:** Rage and sadness
- **Defenses:** Hostility towards straight culture
- **Recovery:** Lesbian/gay/bisexual/ transgender recovering community building
Stage V: Identity Pride

Occurs when the person *immerses himself or herself in the LGBT community and culture to live out identity totally*

- **Tasks:** Full experience of being an LGBT person, confronting internalized homophobia
- **Feelings:** Excitement and focused anger
- **Defenses:** Arrogant pride and rejection of straight culture as the norm
- **Recovery:** Integrating sexuality, identity, and recovery
Stage VI: Identity Synthesis

Occurs when a person develops a fully internalized and integrated LGBT identity and experiences himself or herself as whole when interacting with everyone across all environments.

- **Tasks:** Coming out as fully as possible, intimate gay and lesbian relationship; self-actualization as a gay man, lesbian, bisexual, or transgender person
- **Feelings:** Excitement and happiness
- **Defenses:** Minimal
- **Recovery:** Maintenance (end stage)
Historical measurements and conceptualizations of sexual identity, in particular, bisexual identity have predominantly focused on the Kinsey Scale and the Klein Sexual Orientation Grid. An important issue to remember when looking at the size of sexual minorities within the general population is that those individuals who do not self-label or identify as bisexual are not captured accurately in research data or clinical settings.
Definition of Bisexuality

A person who has the potential to be attracted romantically and/or sexually to people of more than one sex, not necessarily at the same time, not necessarily in the same way and not necessarily to the same degree. It is a sexual orientation in and of itself and distinct from heterosexuality and homosexuality.
Examples of Biphobia

- Bisexuals are confused about their sexual orientation.
- Bisexuals are afraid to be lesbian or gay because of social stigma and oppression from the majority.
- Bisexuals have gotten “stuck” in the coming out process.
- Bisexuals have knuckled under to the social pressure to “pass” as straight.
- Bisexuals are in denial about their sexual orientation.
- Bisexuals are “not fully formed” lesbians or gay men.
Types of Bisexuality

- **Transitional Bisexuals**: Individuals moving from a heterosexual identity to a lesbian or gay one, or, less commonly from a gay or lesbian identity to a heterosexual one.

- **Historical Bisexual**: Those who are now either homosexual or heterosexual but whose past include bisexual relationship.

- **Sequential Bisexuals**: Those who have had same sex and opposite sex partners at different times in their life.

- **Concurrent Bisexuals**: Those who are sexually active with both men and women in the same period of time.
Women and men (including transgender women and men) who identify themselves as heterosexual may have had, or may continue to have, sexual relations with partners of the same gender.

Women and men (including transgender women and men) who identify themselves as gay or lesbian may have had, or may continue to have, sexual relations with partners of the other gender.

People of transgender experience, including male-to-female and female-to-male individuals, may identify themselves as bisexual. This is because bisexuality (and sexual orientation identity generally) is a separate phenomenon from gender identity.
KLEIN SEXUAL ORIENTATION GRID

**Directions:** Use the following scale to rate each of the following variables in each period:

1. Other sex only
2. Other sex mostly
3. Other sex somewhat more
4. Both sexes equally
5. Same sex somewhat more
6. Same sex mostly
7. Same sex only

</table>
Definitions helpful in using the Klein scale:

- **Past:** Your life up to 12 months ago.
- **Present:** The most recent 12 months
- **Ideal:** What do you think you would eventually like?

The Variables:

- **Sexual Attraction:** To whom are you sexually attracted?
- **Sexual Behavior:** With whom have you actually had sex?
- **Sexual Fantasies:** Whom are your sexual fantasies about? (They may occur during masturbation, daydreaming, as part of real life, or purely in your imagination.)
- **Emotional Preference:** Emotions influence, if not define, the actual physical act of love. Do you love and like only members of the same sex, only members of the other sex, or members of both sexes?
- **Social Preference:** Social preference is closely allied with but often different from emotional preference. With members of which sex do you socialize?
- **Lifestyle Preference:** What is the sexual identity of the people with whom you socialize?
- **Sexual Identity:** How do you think of yourself?
- **Political Identity:** Some people describe their relationship to the rest of society differently than their personal sexual identity. For instance, a woman may have a heterosexual sexual identity, but a lesbian political identity. How do you think of yourself politically?
The American Institute of Bisexuality

[www.bisexual.org](www.bisexual.org) This is Fritz Klein’s website and contains information resources, additional resources on use of Klein Grid.

The Bisexual Resource Center

[www.biresource.org](www.biresource.org)
The Classification of people as male or female. At birth infants are assigned a sex, usually based on the appearance of their external anatomy (this is what is written on the birth certificate.) However, a person’s sex is actually a combination of bodily characteristics, hormones, internal and external reproductive organs and secondary sex characteristics.
Gender Identity

One’s internal, deeply held sense of one’s gender. For transgender people, their own internal gender identity does not match the sex they were assigned at birth. Most people have a gender identity of man or woman (or boy or girl). For some people, their gender identity does not fit neatly into one of those two choices. Unlike gender expression, gender identity is not visible to others.
Gender Expression

External manifestations of gender, expressed through one’s name, pronouns, clothing, haircut, behavior, voice or body characteristics. Society identifies these cues as masculine or feminine. They vary over time and by culture. Transgender people seek to make their gender expression align with their gender identity rather than the sex they were assigned at birth.
Describes an individual’s enduring physical, romantic and/or emotional attraction to another person. Gender Identity and sexual orientation are not the same thing.
Nowadays, the term *transgender* is an umbrella term for people whose gender identity, expression and/or behavior is different from those typically associated with their assigned sex at birth. Since the 1990s, the term has often been used to describe groups of gender minorities including but not limited to transsexuals, cross-dressers, androgynous people, genderqueers, and gender non-conforming people.
Transsexuals

Cross-dressers

Drag Queens and Drag Kings

Bigender, Androgyne, Nongendered, Gender-Queer
An older term that is still preferred by some people who have permanently changed - or seek to change - their bodies through medical interventions (including but not limited to hormones and/or surgeries). Unlike Transgender, Transsexual is not an umbrella term
While anyone may wear clothes associated with a different sex, the term cross-dresser is typically used to refer to heterosexual men who occasionally wear clothes, makeup, and accessories culturally associated with women. It’s a form of gender expression and is not done for entertainment purposes. Cross dressers do not wish to permanently change their sex or live full time as women. (old term “transvestite”).
Drag Queens / Kings

Drag Queens are men, typically gay men, who dress like women for the purpose of entertainment. They do not wish to change their sex or live permanently as women. Drag Kings are women who dress as men for purposes of entertainment.
Gender Nonconforming

- Individuals whose gender identity, role or expression differ from what is normative for their assigned sex in a given culture and historical period
- Bigender
- Androgeny
- Nongendered
- Genderqueer
So What about Pronouns?

- He / She / Ze
- Her / His / Hir
Transphobia is an irrational fear of those who challenge gender stereotypes, often expressed as discrimination, harassment and violence.

Internalized Transphobia is discomfort with one’s own transgender feelings or identity as a result of internalizing society’s normative gender expectations.
FTM (Trans Man): A person who transitions from female-to-male, meaning a person who was assigned the female sex at birth but identifies and lives as a male.

MTF (Trans Woman): A person who transitions from male-to-female, meaning a person who was assigned the male sex at birth but identifies and lives as a female.

Gender Affirming Surgery – Any one of many surgeries that may affirm a transgender individual’s gender identity. This can include genital, facial reconstruction chest or other surgeries, can also be referred to as Gender Reassignment Surgery (GRS)

Hormone Therapy – Administration of hormones and hormonal agents to develop characteristics of a different gender or to block the development of unwanted gender characteristics. Hormone therapy is part of many people’s gender transitions and is safest when prescribed and monitored by a healthcare professional.
The distress that is caused by a discrepancy between a person’s gender identity and that person’s sex assigned at birth (and the associated gender role and / or primary and secondary sex characteristics.)
Multiple diagnoses related to gender identity first appeared in the third version of the Diagnostic and Statistical Manual of Mental Disorders (DSM-III), published in 1980. These diagnoses were collapsed into one diagnosis, Gender Identity Disorder, with the release of the DSM IV in 1994.

Diagnostic criteria, which are different for children and adults, include a persistent discomfort with the assigned sex at birth; a persistent discomfort with the role typically associated with their assigned sex at birth; and significant discomfort or impairment at work, social situations, or other major life areas.
Transition includes some or all of the following personal, medical and legal steps:

- Telling family, friends and co-workers
- Using a different name and new pronouns
- Dressing differently
- Changing one’s name and/or sex on legal documents
- Hormone therapy
- One or more types of surgery (possibly)
Clinical Issues and Implications for Treatment

1. History of discrimination by healthcare professionals.

2. Issues about appearance, "passing" and body image

3. History of hiding or suppressing gender identity

4. Lack of family and social support

5. Isolation and lack of connection to positive, proactive transgender community resources

6. Hormone therapy and use or injection history

7. Stigma and discrimination

8. Employment problems

9. Relationship/child custody issues
TREATMENT DO'S AND DON'TS

DO’S

- Use the proper pronouns based on client’s self-identity when talking to/about transgender individuals.
- Get clinical supervision if they have issues or feelings about working with transgender individuals.
- Allow transgender clients to continue the use of hormones when they are prescribed. Advocate that the transgender client using “street” hormones get immediate medical care and legally prescribed hormones.
- Take required training on transgender issues.
TREATMENT DO'S AND DON'TS

DO’S

- Find out the sexual orientation of all clients.
- Allow transgender clients to use bathrooms and showers based on their gender self-identities and gender roles.
- Require all clients and staff members to create and maintain a safe environment for all transgender clients. Post a nondiscrimination policy in the waiting room that explicitly includes sexual orientation and gender identity.
TREATMENT DO'S AND DON'TS

- Don’t make the transgender client educate the staff.
- Don’t assume transgender women or men are gay.
- Never allow staff members or clients to make transphobic comments or put transgender clients at risk for physical or sexual abuse or harassment.
- Do get clinical supervision if you have issues or feelings about working with transgender individuals.
- Do take required training on transgender issues.
Inappropriate questions / statements

- “Have you had the operation / surgery?”
- “Which bathroom do you use?”
- “When did you decide to become transgendered?”
- Provide fashion tips to look more male/female
- “You look like a real man/woman”
- “How do you have sex?”
- Inappropriately touch
Inappropriate words and phrases

- “Deceptive”, “fooling”, “pretending”, “posing”, “trap”, or “masquerading”
- “Tranny”, “she-male”, “he/she”, “it”, “shim”
- Pre-op, post-op, non-op
The World Professional Association for Transgender Health (WPATH), formerly known as the Harry Benjamin International Gender Dysphoria Association (HBIGDA) is a professional organization devoted to the understanding and treatment of gender identity disorders.

www.wpath.org

- National Center for Transgender Equality: http://transequality.org/
Special Issues for Lesbians

1. Multiple stigmas and stressors related to sexism, lesbian identity, and substance use
2. Relationships as a major treatment focus for all lesbians
3. Relapse to protect themselves from painful feelings surrounding their sexuality
Special Issues for Gay Men

1. Linking of substance use and sexual expression
2. Internalized homophobia
3. The role of sexual use and violence
4. Limited social outlets
Special Issues for Gay Men

5. Geographic and cultural differences have an important impact on the lives of gay men.

6. Limited role models and deeply ingrained stereotypes

7. Substance use and HIV/AIDS.
Gay Men and Substance Misuse

- Age Related use patterns
- Club Drugs
- Drug and Alcohol use related to stages of Coming Out Process
Continuum of Treatment

- “Repair” the sexual identity - ignore the AOD
- Treat the sexual identity - fix the addiction
- Treat the addictions - ignore the orientation
- Treat the AOD - minimize the orientation
- Treat the AOD - acknowledge the sexual identity
- Treat the AOD - integrate the sexual identity into recovery
- Integrate the sexual identity as significant to treatment and recovery
Special Assessment Questions

- Level of comfort being LGBT person?
- Stage of coming out?
- Family/support/social network?
- Health factors?
- Milieu of use?
- Drug use and sexual identity or sexual behavior connections?
- Use more before, during or after sex?
- Partner/lover use?
- Legal problems related to sexual behavior?
- Gay bashing?
- Same-gender domestic violence?
- Out as LGBT in past treatment experiences?
- Correlates of sober periods?
Defining LGBT Affirmative Care

- **LGBT-tolerant**
  Aware that LGBT people exist and use their services

- **LGBT-sensitive**
  Aware of, knowledgeable about, and accepting of LGBT people

- **LGBT-affirmative**
  Actively promote self-acceptance of an LGBT identity as a key part of recovery
I’ve learned that people will forget what you said, people will forget what you did but people will never forget how you made them feel.

Maya Angelou
