Crisis = Danger & Opportunity

Levels of Violence

- Childhood
- Adolescence
- Adult
- Street (workplace and community)
- Consumer Culture
- Media
- War
- Planet

Global Violence

- 1.6 million people worldwide die each year from violence. More than 51,000 are Americans.
- Suicide accounts for 54% of violent deaths globally, homicide for 35% and war and other armed conflict 11%.

Source: World Health Organization
Centers for Disease Control and Prevention

Homicide Rates for Men Ages 15 - 24
Around the World
(Rate per 100,000)
Beyond Trauma:
A Healing Journey for Women

Statistics
The following statistics illustrate how pervasive interpersonal violence is in the lives of women and girls.

- Approximately 1.5 million women are raped or physically assaulted by an intimate partner each year in the US. Women under 24 years of age suffer the highest rates of rape (NOW, 2010).
- There is one sexual assault every about every two minutes. (FBI CIUS, 2008).

© S. Covington, Ph.D., 2015

Statistics
- 1 in 6 women will be sexually assaulted in her lifetime, with college age women 4 times more likely to be sexually assaulted (RAI NN, 2007).
- More than half of rapes occur before age 18 and 22% occur before age 12 (CDC, 2009b).
- 1 in 5 girls and 1 in 10 boys are sexually victimized before adulthood (Nat’l Center for Missing and Exploited Children, 2008).
- In homes where DV occurs, children are seriously abused or neglected at a rate that is 1,500% higher than the national average for the general population (Children’s Defense Fund Ohio, 2009).

© S. Covington, Ph.D., 2015

Statistics
- Children from violent homes have a higher tendency to commit suicide, abuse drugs and/or alcohol, and commit violence against their own partners and children (Whitfield, Anda, Dube, and Felitti, 2003).
- Children born into poverty risk exposure to violence that is so high they are guaranteed to be affected by trauma (Women’s Law Project, 2002).

© S. Covington, Ph.D., 2015

Statistics
- While both male and female children are at risk for abuse, females continue to be at risk for interpersonal violence in their adolescence and adult lives (Covington & Surrey).
- At least 50% of child abuse and neglect cases are associated with parental drug or alcohol abuse (ECMEF, 2008).
- One or more parents were responsible for 70% of child fatalities caused by abuse or neglect (HHS, 2008a).
- In 2005, 1,181 women were murdered by their intimate partner -- more than 3 women murdered per day (FVPF, 2009b).
- Every year there are 2 million injuries from domestic violence (CDCP, 2008).

© S. Covington, Ph.D., 2015

Statistics
- If a victim of domestic violence, a woman is 80% more likely to have a stroke, 70% more likely to drink heavily or to have a heart attack, 60% more likely to have asthma (FVPF, 2009d).
- While relationship violence happens to women of every race and ethnic background, African-American women are physically assaulted at a rate that is 35% higher than Caucasian women, and about 2-1/2 times the rate of women of other races. (National Coalition Against Domestic Violence, 2000).

© S. Covington, Ph.D., 2015

Statistics
- 1/3 of women in state prison and 1/4 in jails said they had been raped (BJS, 1999).
- Women in prison reported childhood abuse at a rate almost twice that of men; abuse of women as adults was eight times higher than the rate for men (Messina et. al., 2001).
- Between 23-37% of female offenders reported that they had been physical or sexually abused before the age of 18 (BJS, 1999).

Violence Against Women

Violence against women is so pervasive that the United Nations has addressed and defined violence against women as “any act of gender-based violence that results in, or is likely to result in, physical, sexual or psychological harm or suffering to women, including threats of such acts, coercion or arbitrary deprivations of liberty, whether occurring in public or private life.”

(United Nations General Assembly, 1993)

Sexual Assault Graph

Moral Challenges

• 19th century - slavery
• 20th century - totalitarianism
• 21st century – brutality against women and girls

(NY Times 9/23/09)

Two Kinds of Suffering

• Natural
• Created

Definition of Trauma

The diagnostic manual used by mental health providers defines trauma as:

a) exposure to actual or threatened death, serious injury or sexual violation.

©S. Covington, Ph.D., 2015

KSAODS

Beyond Trauma: 
A Healing Journey for Women

Definition of Trauma (cont.)

• The exposure must result from one or more of the following scenarios in which the individual:
  • directly experiences the traumatic event;
  • witnesses the traumatic event in person;
  • learns that the traumatic event occurred
  • to a close family member or close friend;
  • experiences first-hand repeated or extreme exposure to aversive details of the traumatic event (not through media, pictures, television or movies unless work-related)

(Definition of Trauma Adapted from: American Psychiatric Assoc. [APA] DSM-5)

Definition of Trauma (cont.)

• The disturbance, regardless of its trigger, causes significant distress or impairment in the individual’s social interactions, capacity to work, or other important areas of functioning.

(Definition of Trauma Adapted from: American Psychiatric Assoc. [APA] DSM-5)

POSTTRAUMATIC STRESS DISORDER

Presence of one or more of the following:

• Recurrent, involuntary, intrusive symptoms, such as dreams, memories related to the traumatic event(s)
• Dissociative symptoms, including flashbacks, on a continuum including complete loss of time
• Intense or prolonged psychological stress at exposure to internal or external cues
• Marked physiological reactions to internal or external cues that symbolize or resemble an aspect of the traumatic event(s)

POSTTRAUMATIC STRESS DISORDER (cont.)

Persistent avoidance of stimuli after the event:

• avoidance or efforts to avoid distressing memories, thoughts, or feelings about or closely associated with the traumatic event(s)
• Avoidance of or efforts to avoid external reminders that arouse distressing memories, thoughts or feelings

Negative alterations in cognitions and mood associated with the traumatic event(s) as evidenced by two or more of the following:

Inability to remember an important aspect of the traumatic event(s) not due to use of drugs or alcohol, head injury

POSTTRAUMATIC STRESS DISORDER (cont.)

• Persistent and exaggerated negative beliefs or expectations about oneself, others, or the world
  e.g. “I am bad; No one can be trusted; the world is completely dangerous, My whole nervous system is completely ruined”

Persistent, distorted cognitions about the cause or consequences of the traumatic event(s) that lead the individual to blame him/herself or others

Persistent negative emotional state
  e.g. fear, horror, anger, guilt, or shame

POSTTRAUMATIC STRESS DISORDER (cont.)

• Marked or diminished interest or participation in significant activities
• Feelings of detachment or estrangement from others
• Persistent inability to experience positive emotions e.g. inability to experience happiness, satisfaction, or loving feelings

Marked alterations in arousal and reactivity associated with the traumatic event(s), beginning or worsening after the traumatic event(s) occurred as evidenced by two of the following:

KSAODS
August 19, 2015
Louisville, KY
Beyond Trauma:
A Healing Journey for Women

**POSTTRAUMATIC STRESS DISORDER (con’t.)**

- Irritable behavior and angry outbursts (with little or no provocation) typically expressed as verbal or physical aggression toward people or objects
- Reckless or self-destructive behavior
- Hypervigilance
- Exaggerated startle response
- Problems with concentration
- Sleep disturbance

(Present for more than one month)

**POSTTRAUMATIC STRESS DISORDER (con’t.)**

- G) the disturbance causes clinically significant distress or impairment in social, occupational, or other important areas of functioning
- H) the disturbance is not attributable to the physiological effects of a substance or another medical condition
- Specify “With dissociative symptoms” if depersonalization (feeling detached, or an impartial observer) or derealization (feeling unreality of surroundings such as dreamlike, unreal, distant or distorted) are present
- Specify “With delayed expression” if full criteria are not met until at least 6 months after the event

**Historical Trauma**

- Across generations
- Massive group trauma
- Examples include: Native Americans, African Americans, Holocaust survivors, Japanese internment survivors

**Trauma and Substance Abuse**

The women with more experiences of trauma had more severe substance abuse issues.

**Abuse and Substance Use**

Abuse within the first five years of life is significantly associated with substance use in girls as young as twelve, through the teen years, and in the early twenties.

**Substance Use**

Women who experience more than one sexual assault are 3.5 times more likely to either start or increase the frequency of their substance use than women with only one assault experience.
Beyond Trauma:
A Healing Journey for Women

Sexual Abuse and Mental Health

Women who have histories of sexual assault commonly experience multiple factors:
• 65 percent experience PTSD
• 51 percent experience depression
• 82 percent develop anxiety
• 49 percent become dependent on alcohol
• 61 percent use illicit substances
• 44 percent experience thoughts of suicide
• 19 percent attempt suicide

Post-traumatic Stress Disorder and Substance Abuse

Women’s abuse of drugs and alcohol often is reported to start at the same time as symptoms of post-traumatic stress disorder begin, in contrast to men, who more often begin substance abuse prior to PTSD symptoms.

America Has an Incest Problem (January 2013)

Child sexual abuse impacts more Americans annually than cancer, AIDS, gun violence, LGBT inequality, and the mortgage crisis combined.

95% of teen prostitutes and at least 35% of female prisoners were abused as kids.

Sexually abused youth are:
• Twice as likely to be arrested for a violence offense as adults
• Twice the risk for lifelong mental health issues
• Twice as likely to attempt or commit teen suicide

Incest is the single biggest commonality between drug and alcohol addiction, mental illness, teenage and adult prostitution, criminal activity, and eating disorders.

The Longest War is the One Against Women

By Rebecca Solnit
http://www.commondreams.org/view/2013/01/24-10
Published on Thursday, January 24, 2013 by TomDispatch.com

© S. Covington, 2015

The Longest War is the One Against Women (cont.)

Homicide 1976-2005
- 88.8% men
- 11.2% women
Homicide (guns)
- 91.3% men
- 8.7% women
Homicide (multiple victims)
- 93.5% men
- 6.5% women

© S. Covington, 2015

The Longest War is the One Against Women (cont.)

• Most perpetrators of violence are men
• Doesn’t mean all men are violent
• Men also suffer violence, largely at the hands of other men

© S. Covington, 2015

The Longest War is the One Against Women (cont.)

Pandemic of violence by men against women, both intimate and stranger violence

© S. Covington, 2015

Men, Violence & Trauma

• 75 percent of student suspensions, expulsions, grade failures, special-education referrals, school-violence casualties, and all other assaults are for boys
• 75 percent of teenage suicides are boys
• 70 percent of all suicides are boys/men
• 80 percent of the homeless are boys/men

© S. Covington, 2015

“What I have concluded from decades of working with… every kind of violent criminal is that… the way to prove one’s manhood… to gain respect… is to commit a violent act.”

- James Gilligan

© S. Covington, 2015

KSAODS
August 19, 2015

Men, Violence & Trauma (cont.)

- 80 percent of homicide victims are men
- 93 percent of prison inmates are men
- 99 percent of executed prisoners are men (in the last decade, 700 men and 10 women)

(Lyme et al., 2006)

How Men Respond to Trauma

- Men respond differently to similar events:
  - “No big deal”
  - “Just get over it”
  - “Suck it up”
  - “Don’t be a wimp”
  - “Never let them see you sweat”
  - “Pull yourself up by your bootstraps!”
  - “Suffer in Silence”

- But the real reason is.....

“Real Men Can Handle Anything!”

What does the prevalence data tell us?

- Many people with trauma histories have overlapping problems with mental health, substance abuse, physical health and are victims or perpetrators of crime.
- Victims of trauma are found across all systems of care.

Beyond Trauma:  
A Healing Journey for Women

Theoretical Foundation
The theories related to gender and substance abuse (and any other relevant treatment services) that create the framework of thought for program development. This is the knowledge base that creates the foundation upon which the program is developed.

Treatment Strategies
The approaches used in the program that create the therapeutic process. These are the ways in which theory is operationalized (how theory is applied).

Theoretical Foundations
- Relational Theory & Female Psychological Development
- Addiction Theory
- Trauma Theory

Core Principles of Trauma Informed Care
- Safety (physical and emotional)
- Trustworthiness
- Choice
- Collaboration
- Empowerment

Trauma Specific Services
Services designed specifically to address violence, trauma, and related symptoms and reactions. The intent of the activities is to increase skills and strategies that allow survivors to manage their symptoms and reactions with minimal disruption to their daily obligations and to their quality of life; and eventually to reduce or eliminate debilitating symptoms and to prevent further traumatization and violence.

**Disorders Related to Trauma and Substance Abuse in Women’s Lives**

Disorders Related to Trauma and Substance Abuse:

- **Depressive Disorders NOS**: 22.9%
- **Major Depressive Disorders**: 17.5%
- **Post traumatic Stress Disorders**: 16.3%
- **Neurotic Anxiety Disorders**: 13.8%
- **Bipolar Disorders**: 13.7%
- **Mood or Dysthymic Disorders**: 5.3%
- **Psychotic Disorders**: 4.8%
- **Personality and Misc. Disorders**: 5.8%

Source: Patterns of Comorbidity among Women with Childhood Interpersonal Trauma, Mental Health Disorders, and Substance Related Disorders. Journal of Behavioral Health Services & Research (in press)

**Post-traumatic Stress Disorder**

- Re-experiencing the event through nightmares and flashbacks.
- Avoidance of stimuli associated with the event (for example, if a woman was raped in a park, she may avoid parks, or if she was assaulted by a blonde man, she may avoid men with blonde hair).
- Estrangement (the inability to be emotionally close to anyone)

**Post-traumatic Stress Disorder (cont.)**

- Numbing of general responsiveness (feeling nothing most of the time)
- Hyper-vigilance (constantly scanning one’s environment for danger, whether physical or emotional)
- Exaggerated startle response (a tendency to jump at loud noises or unexpected touch) (DSM – IV)

**Three Symptom Clusters:**

- Re-experiencing
- Numbing and Avoidance
- Hyperarousal

**Post-traumatic Stress Disorder (cont.)**

- Depression
- Anxiety
- Panic disorder
- Phobic disorder
- Substance abuse
- Physical disorders

Beyond Trauma:
A Healing Journey for Women

When is a Woman Ready for Trauma Processing?

- She is able to use some safe coping skills
- She has no major current crises or instability (e.g., homelessness or domestic violence)
- She is willing to do this type of work
- She can reach out for help when in danger
- She is not using substances to such a severe degree that emotionally upsetting work may increase her use

When is a Woman Ready for Trauma Processing?

- Her suicidality has been evaluated and taken into account
- She is in an ongoing system of care that is stable and consistent, with no immediate planned changes (e.g., discharge from inpatient unit or residential program)

Secondary Traumatic Stress (STS)

- Compassion fatigue
- Burnout
- Vicarious traumatization

Vicarious Traumatization Spiral

- Empathic Engagement
- Repeated exposure to trauma histories
- Traumatic Stress Symptoms
- Apathy/Cynicism
- Vicarious Trauma (constriction)

Key Elements (Staff and Clients)

- Learn what trauma/abuse is
- Understand typical responses
- Develop coping skills

What Makes a Good Facilitator?

The following qualities in a facilitator will help to ensure a positive group experience:

• Trustworthy
• Credible
• Available
• Reliable, consistent
• Hopeful
• Warm, compassionate
• Emotionally mature

Role of the Facilitator

• Begin and end on time
• Maintain structure of the group
• Move the group through the content of each session
• Lead by example by having appropriate boundaries and containing your feelings
• Allow each woman to have her own experience of the group

What Makes a Difference?

• Creating a safe environment
• Listening to her story
• Empathy

What Makes a Good Facilitator? (cont.)

• Healthy boundaries, respects confidentiality
• Committed to and interested in women’s issues
• Multi-cultural sensitivity and responsiveness
• Appropriate gender - a female should facilitate the all-female groups

“Therapeutic culture” has these elements

• Attachment: a culture of belonging
• Containment: a culture of safety
• Communication: a culture of openness
• Involvement: a culture of participation and citizenship
• Agency: a culture of empowerment

© S. Covington, Ph.D., 2015
Beyond Trauma: A Healing Journey for Women

Ten Principles of Trauma-Informed Services

1. Trauma-Informed Services Recognize the Impact of Violence and Victimization on Development and Coping Strategies
2. Trauma-Informed Services Identify Recovery from Trauma as a Primary Goal
3. Trauma-Informed Services Employ an Empowerment Model
4. Trauma-Informed Services Strive to Maximize Choices and Control Over One’s Own Recovery

Ten Principles of Trauma-Informed Services (cont.)

5. Trauma-Informed Services Are Based in a Relational Collaboration
6. Trauma-Informed Services Create an Atmosphere That Is Respectful of Survivor’s Need for Safety, Respect, and Acceptance
7. Trauma-Informed Services Emphasize Strengths, Highlighting Adaptation Over Symptoms and Resilience Over Pathology
8. The Goal of Trauma-Informed Services Is to Minimize the Possibilities of Retraumatization

Ten Principles of Trauma-Informed Services (cont.)

9. Trauma-Informed Services Strive to Be Culturally Competent and to Understand Each Person in the Context of Their Life Experiences and Cultural Background
10. Trauma-Informed Agencies Solicit Consumer Input and Involve Consumers in Designing and Evaluating Services

What would be observed in a setting?

Trauma Informed
- Recognition of high prevalence of trauma
- Assess for traumatic histories & symptoms
- Recognition of culture and practices that are re-traumatizing

Not Trauma Informed
- Lack of education on trauma prevalence & “universal precautions”
- Cursory or no trauma assessment
- “Tradition of toughness” valued as best care approach

What would be observed in a setting?

Trauma Informed
- Power/Control minimized – constant attention to culture
- Caregivers/Supporters - Collaboration
- Staff understand that violence and conflict arise, most often, due to situational factors

Not Trauma Informed
- Staff demeanor, tone of voice = Power!
- Rule Enforcers - Compliance
- “Client-blaming” is norm

What would be observed in a setting?

Trauma Informed
- Quietly moving and informing people of schedule
- “Let’s talk and find you something to do”
- “May I help you?”

Not Trauma Informed
- Yelling “lunch” or “medications”
- “If I have to tell you one more time…”
- “Step away from the desk”

© S. Covington, Ph.D., 2015
Source: NASMHPD 2008

KSAODS
August 19, 2015

Beyond Trauma: A Healing Journey for Women

What would be observed in a setting?

**Trauma Informed**
- Understand that all behavior has meaning
- Objective, neutral language
- Woman is center of her treatment
- Transparent systems open to outside parties

**Not Trauma Informed**
- Behavior seen as intentionally provocative & volitional
- Labeling language: “manipulative, needy, attention-seeking”
- Lack of self-directed care & over-reliance on medication
- Closed system – advocates discouraged/barred

Source: NASMHPD 2008
© S. Covington, Ph.D., 2015

What would be observed in a setting?

**Trauma Informed**
- Routine ‘check-in’ with the person – eye contact
- Saying hello and goodbye at beginning and end of day

**Not Trauma Informed**
- Checks to simply locate – focus on task, not person
- Coming in and leaving without acknowledgement

Source: NASMHPD 2008
© S. Covington, Ph.D., 2015

Creating the Environment

If the society supports:
- Oppression
- Silence
- Denial
- Blaming the victim

**Therapeutic milieu must emphasize:**
- Empowerment & mutuality
- Open communication
- Affirmation and validation
- Accountability/relational model

Source: Risking Connection 1999
© S. Covington, Ph.D., 2015

Sanctuary

© S. Covington, Ph.D., 2015

What is Sanctuary?

- Sacred place
- Place of refuge/protection
- Shelter

This is promoted by setting, voice tone, engagement

© S. Covington, Ph.D., 2015

**Beyond Trauma Module A Session 1**

**Connections between Violence, Abuse & Trauma**

**Module A: Violence, Abuse, and Trauma**

**Session 1**  
Connections between Violence, Abuse & Trauma

**Session 2**  
Power and Abuse

(10 activities)

**Inner Self & Outer Self**

- Impacts Inner Self – It can impact our inner life… our thoughts, feelings, beliefs, values. For example, some women believe that “you can’t trust anyone”, and “the world is a very unsafe place.”

**Inner Self & Outer Self (cont.)**

- Impacts Outer Self – It can impact our outer life… our outer life consists of our relationships and our behavior. Many women who have experienced trauma struggle with their relationships – families, friends, sexual relationships.

**Traumatic Events**

Trauma can take many forms:

- Emotional, sexual or physical abuse,
- Extremely painful and frightening medical procedures
- Catastrophic injuries and illnesses
- Rape or assault
- Muggings
- Domestic violence
- Burglary

Beyond Trauma: A Healing Journey for Women

Traumatic Events (cont.)

- Witnessing murder
- Automobile accidents
- Immigration
- Natural disasters (hurricanes, earthquakes, tornadoes, fires, floods, volcanoes)
- Abandonment (especially for small children)
- Terrorism such as September 11, 2001
- Witnessing violence such as a parent harming another parent

© S. Covington, Ph.D., 2015

Traumatic Events (cont.)

- Loss of a loved one and severe bereavements (even of a pet)
- Combat/war
- Torture
- Kidnapping
- Intergenerational (cultural) trauma
Of all these forms of trauma, women are at greater risk of interpersonal abuse than men.

© S. Covington, Ph.D., 2015

Trauma & Abuse

- Sexual abuse
- Physical abuse
- Emotional abuse
- Domestic violence
- Witnessing abuse/violence
- Stigmatization
  - Incarcerated women
  - Lesbian, transgendered
  - Women of color
  - Poor women

Safety

- External
External safety issues involve actions we take in our surroundings. We may lock our doors, choose not to go out alone at night, or un-list our telephone number. We do things to try and keep ourselves physically safe in our environment.
Beyond Trauma:
A Healing Journey for Women

Safety

• Internal
Internal safety is how we take care of our emotions and feelings. If we feel overwhelmed, sad, angry, lonely or frightened, we need to have ways to take care of ourselves when we are stressed.

Focus Questions

• How are boys and girls treated differently?
• What does it mean to “act like a woman”?
• What does it mean to “act like a man”?
• What would it be like if our roles and the messages were reversed?

Characteristics of Batterers

“Healing Trauma”

Behavior as Clues:
• Jealousy
• Controlling behavior
• Quick involvement
• Unrealistic expectations
• Isolation
• Blaming others for problems
• Blaming others for feelings
• Hypersensitivity

KSAODS

Characteristics of Batterers (cont.)
• Cruelty to animals and/or children
• “Playful” use of force in sex
• Verbal abuse
• Rigid sex roles
• Dr. Jekyll and Mr. Hyde
• Past battering
• Threats of violence
• Hitting or breaking objects
• Use of force during an argument

Guided Imagery:
Safe Place

Module B: The Impact of Trauma on Women’s Lives
Session 3 Reactions to Trauma
Session 4 How Trauma Impacts our Lives
(7 activities)

Beyond Trauma
Module B
Session 3
Reactions to Trauma

Biological Reactions to Trauma
• Fight
• Flight
• Freeze

Symptoms of Trauma
• Hyper-arousal – this is the most common reaction. It includes difficulty breathing (panting, shallow, rapid), increased heart rate, cold sweats, muscular tension, tingling, racing thoughts, worry.
• Constriction – this alters breathing, muscle tone and posture. It constricts blood vessels in the skin, arms, legs, and internal organs, and tenses muscles.

Hyper-arousal and constriction describe a physical response.
Symptoms of Trauma (cont.)

- Dissociation – your mind disconnects from the event or physical reality of what is happening. This is a mind-body split. This feels like “losing time” and can include loss of memory.
- Denial – this is like dissociation only not as severe. A woman ignores or fails to acknowledge a feeling or situation or acts as though it is unimportant. Dissociation and denial are part of the psychological response.

Trauma and the Brain

- Exposure to trauma can create a PTSD response in the limbic system
- The PTSD response can become complex and chronic.

Trauma and the Brain

- Trauma disrupts the chemistry of the brain and can predispose a woman to alcohol and drug use, eating disorders, self-injuring behavior and mental health problems.
- When trauma occurs in childhood, it can have lasting effects on brain development.

Reactions

- Physical reactions are automatic and are not controlled by us.
- Brain reactions are also automatic.
- The body stores reactions. Then the body reacts as though it is back re-living the traumatic events of the past

Session 4
How Trauma Impacts Our Lives
Beyond Trauma: A Healing Journey for Women

**Trauma and its aftermath**

Women report the following:

- “Losing control” of life
- Re-experiencing – can’t concentrate
- Self-image changes
- Depression
- Relationship problems
- Sexuality issues

**Relationship Problems might include:**

- Idealizing or overvaluing relationships
- Fear of commitment
- Self-imposed isolation
- Triangulating with others
- Humiliating interactions

**Relationship Problems might include:**

- Involvement in abusive or criticizing relationships
- Difficulty trusting self/others with intimacy
- Tolerating abusive or excessive neediness patterns
- Emotional and physical care-taking of others at expense of self

**Sexual Issues might include:**

- Avoidance/fear of sex
- Approaching sex as obligation
- Negative feelings with touch
- Difficulty with arousal, sensation
- Vaginal pain
- Emotional distance during sex (spacing out)
- Disturbing sexual thoughts and images
- Compulsive or inappropriate sexual behavior
- Difficulty in intimate relationships

**Module C: Healing from Trauma**

- **Session 5**: The Addiction and Trauma Connection: Spirals of Recovery and Healing
- **Session 6**: Grounding and Self-Soothing
- **Session 7**: Abuse and the Family
- **Session 8**: Mind and Body Connection
- **Session 9**: The World of Feelings
- **Session 10**: Healthy Relationships: Wheel of Love
- **Session 11**: Endings and Beginnings

Beyond Trauma: A Healing Journey for Women

Women, Substance Abuse and Trauma

Often women believe that alcohol and other drugs help them in a variety of ways to:
- Make connections with others
- Comfort themselves
- Manage or avoid feelings
- Escape physical pain
- Ease social withdrawal
- Feel comfortable with sexual intimacy
- Create distance

Women, Substance Abuse and Trauma

- Build courage
- Increase hope, the world seems better
- Forget the past
- Increase a sense of vitality
- Deal with a violent partner
- Dissociate (altered state)
- Feel numb
- Rewire the brain
- Maintain the status quo

Upward Spiral

Addiction (constriction) → Recovery (expansion)

Transformation

Trauma (constriction) → Healing (expansion)

Grounding

Grounding techniques are strategies to help a person who is dissociating ("losing time", emotionally absent) "come back" into current reality and feelings.

Grounding techniques help the person become aware of the here and now. Grounding techniques can help women realize that they are in the here and now and what they are experiencing is in the past and it is not happening now.

Self-Soothing

Alone

Daytime

Night Time

With Others

Beyond Trauma
Module C
Session 7

Abuse in the Family

Psychological Abuse
- Sexual Jokes
- Verbal harassment
- Violating boundaries
- Telling child inappropriate sexual information

Covert Abuse
- Inappropriate touching
- Voyeurism
- Ridicule of bodies
- Sexual Hugs
- Pornography

Overt Abuse
- Exhibitionism
- French kissing
- Fondling
- Oral Sex
- Penetration

The single most powerful and effective way to step safely out of rigid childhood roles and heal the wounds of the past is to re-parent yourself. It is a critical part of self-healing that will allow you to know and love yourself and have healthy intimate relationships in the future.
Beyond Trauma: A Healing Journey for Women

**Reparenting (cont.)**

- To do this you must be attuned to your inner child’s feelings and needs.
- Attunement to your inner child can be the first step toward love and healing.
- Be empathetic, understanding and gentle; validate the child’s feelings and address them openly.

© S. Covington, Ph.D., 2015

**Emotional Wellness**

1. Sense having a feeling.
2. Locate feeling in the body.
3. Name the feeling.
4. Express feeling appropriately
5. Ability to contain feeling.

© S. Covington, Ph.D., 2015

**Body-Mind Connection**

- Slow Down. Stop.
- What am I feeling?
- Does the intensity of the feeling match the situation?
- How old am I… as I have this feeling?

The World of Feelings

Common Feelings

• Anger

• Loss

• Shame

Beyond Anger and Violence
Session Six

Anger-Management Strategies
Anger Dos and Don’ts
Self-Reflection Tool
Visualization and Collage of My Personal Best

(4 Activities)

Activity:
Anger Management Strategies

1. Accept anger as a normal emotion. Try not to feel guilty for feeling angry.

2. Learn to identify your triggers.

3. Learn to recognize old anger as opposed to current anger.

4. Try to identify the feelings underneath the anger.

5. Stop and think before reacting to your anger.

Activity:
Anger Management Strategies (cont.)

6. Give yourself a “cool down” period when you are feeling intense anger.

7. Use the “Creating a Container” technique or another form of “time out”.

8. Instead of “stuffing” angry feelings, talk to someone.

9. Take responsibility for your actions and choices. Do not blame others.

Beyond Trauma:  
A Healing Journey for Women

Activity: 
Anger Management Strategies (cont.)

10. Share feelings in a direct, respectful way.
11. Accept that there are things you can’t change or control.
12. Make a decision to manage your anger, rather than letting it manage you.

Beyond Trauma 
Module C: 
Session 10

Healthy Relationships: 
Wheel of Love

Relationship Wheel

Respect, Mutuality, Compassion

Respect
Respect is the appreciation of someone’s values and it begins to happen when we see their integrity. We often earn respect when we are willing to do the right thing or take the “right action,” particularly when the choice is difficult.

Respect, Mutuality, Compassion

Mutuality
Mutuality means there is an equal investment in the relationship. Each person has a willingness and desire to see the other, as well as being seen; to hear the other, as well as being heard; and to be vulnerable, as well as respecting the other’s vulnerability. Mutuality also means that there is an awareness of the “we,” not a sole focus on two “I”s.

Respect, Mutuality, Compassion

Compassion
Compassion is similar to empathy but it occurs on a deeper level. Empathy is understanding another’s feeling and being able to feel with them. Compassion means that we go a step further and join with them in their struggle or pain. When we are compassionate we lend our selves to another’s process – we give of ourselves in order to be with them emotionally.
Steps to a Healthy Relationship

- Similarities
- Ability to Deal with Change
- Compatible Values
- Effective, Open Communication
- Effective Conflict/Anger Resolution
- Effective Negotiation
- Firm Personal Boundaries
- Healthy Sexual Expression
- Shared Quality Time
- Friendship

(Covington & Beckett, 1998)

Relationship Wheel

Wheel of Love

Beyond Trauma
Module C
Session 11

Endings and Beginnings

Appreciation

- What I appreciate about the other women in the group.
- What I appreciate about the group.
Spirituality

One definition of spirituality is oneness, wholeness, connection to the universe; belief in something greater than yourself, trust in a higher or deeper part of yourself.

Spiritual Practices

• Quiet time
• Prayer
• Meditation
• Centering activities such as singing, music
• Being out in nature
• Keeping a journal

Spiritual Practices (cont.)

• Attending church, synagogue, mosque, temple
• Helping others in need
• Creating personal altars...
• Learning from others.
• Celebrations!

Beyond Trauma Themes

• Safety
• Empowerment
• Connection (Aloneness)
• Normal reactions (Shame)
• Mind-body connection
• Substance abuse
• Woman-centered

Core Principles of Trauma-Informed Care

- Safety: Ensuring physical and emotional safety
- Trustworthiness: Maximizing trustworthiness, making tasks clear, and maintaining appropriate boundaries
- Choice: Prioritizing consumer choice and control
- Collaboration: Maximizing collaboration and sharing of power with consumers
- Empowerment: Prioritizing consumer empowerment and skill-building

What Makes a Difference?

- Creating a safe environment
- Listening to her/his story
- Empathy

Creating a protected space where survivors can speak their truth is an act of liberation; bearing witness is an act of solidarity. For many of us, there can be no greater honor.

— J. Herman (1997)
Trauma and Recovery. New York: Basic Books.
